10. Users problem and app

Situation and Problem

Situation:

Families today capture their memories across many disconnected platforms—phones, social media, notebooks, photo albums, and voice notes. There is no dedicated, interactive, or long-lasting space designed specifically for preserving family stories. As a result, meaningful memories, recipes, traditions, and personal histories often get lost or forgotten over time, especially across generations. Families want to stay connected to their roots, but they lack a simple, engaging way to document and revisit their shared heritage together.

Problem:

Families struggle to preserve their shared history in a meaningful, organized, and engaging way. Memories often become fragmented—saved across phones, social media, paper documents, or not documented at all. As older generations pass down stories verbally, much of this knowledge gets lost because there is no unified, interactive, or collaborative space designed specifically for capturing and sharing family heritage. As a result, important traditions, recipes, photos, and personal stories fade over time, leaving younger generations with incomplete or missing parts of their family's identity.

Solution and Value Proposition

Solution:

Our app introduces a Digital Family Story Tree which is a living, interactive space where families can build and explore their shared history. Each family member can contribute stories, photos, recipes, advice, and memories, which visually branch out like a growing tree. The app serves as both a collective memory archive and a beautiful, evolving representation of the family's journey through generations. It transforms scattered memories into a single, organized, and immersive experience that strengthens family connection and preserves heritage for the future.

Value Proposition:

Our app helps families preserve and organize their shared history in one interactive, collaborative space. By turning scattered memories, photos, recipes, and stories into a living Digital Family Story Tree, we make it easy and engaging for every generation to contribute, explore, and relive family heritage—keeping connections strong and memories alive for years to come.

Functionalities & Screens

1. Add New Family Members

- a. Users can add a new person to the Family Story Tree with name, picture, and basic details.

2. Two Viewing Modes

- a. Tree View: A visual, branching family tree.
- b. List View: A simple list of all family members with quick access to their profiles.

3. Member Profile Pages

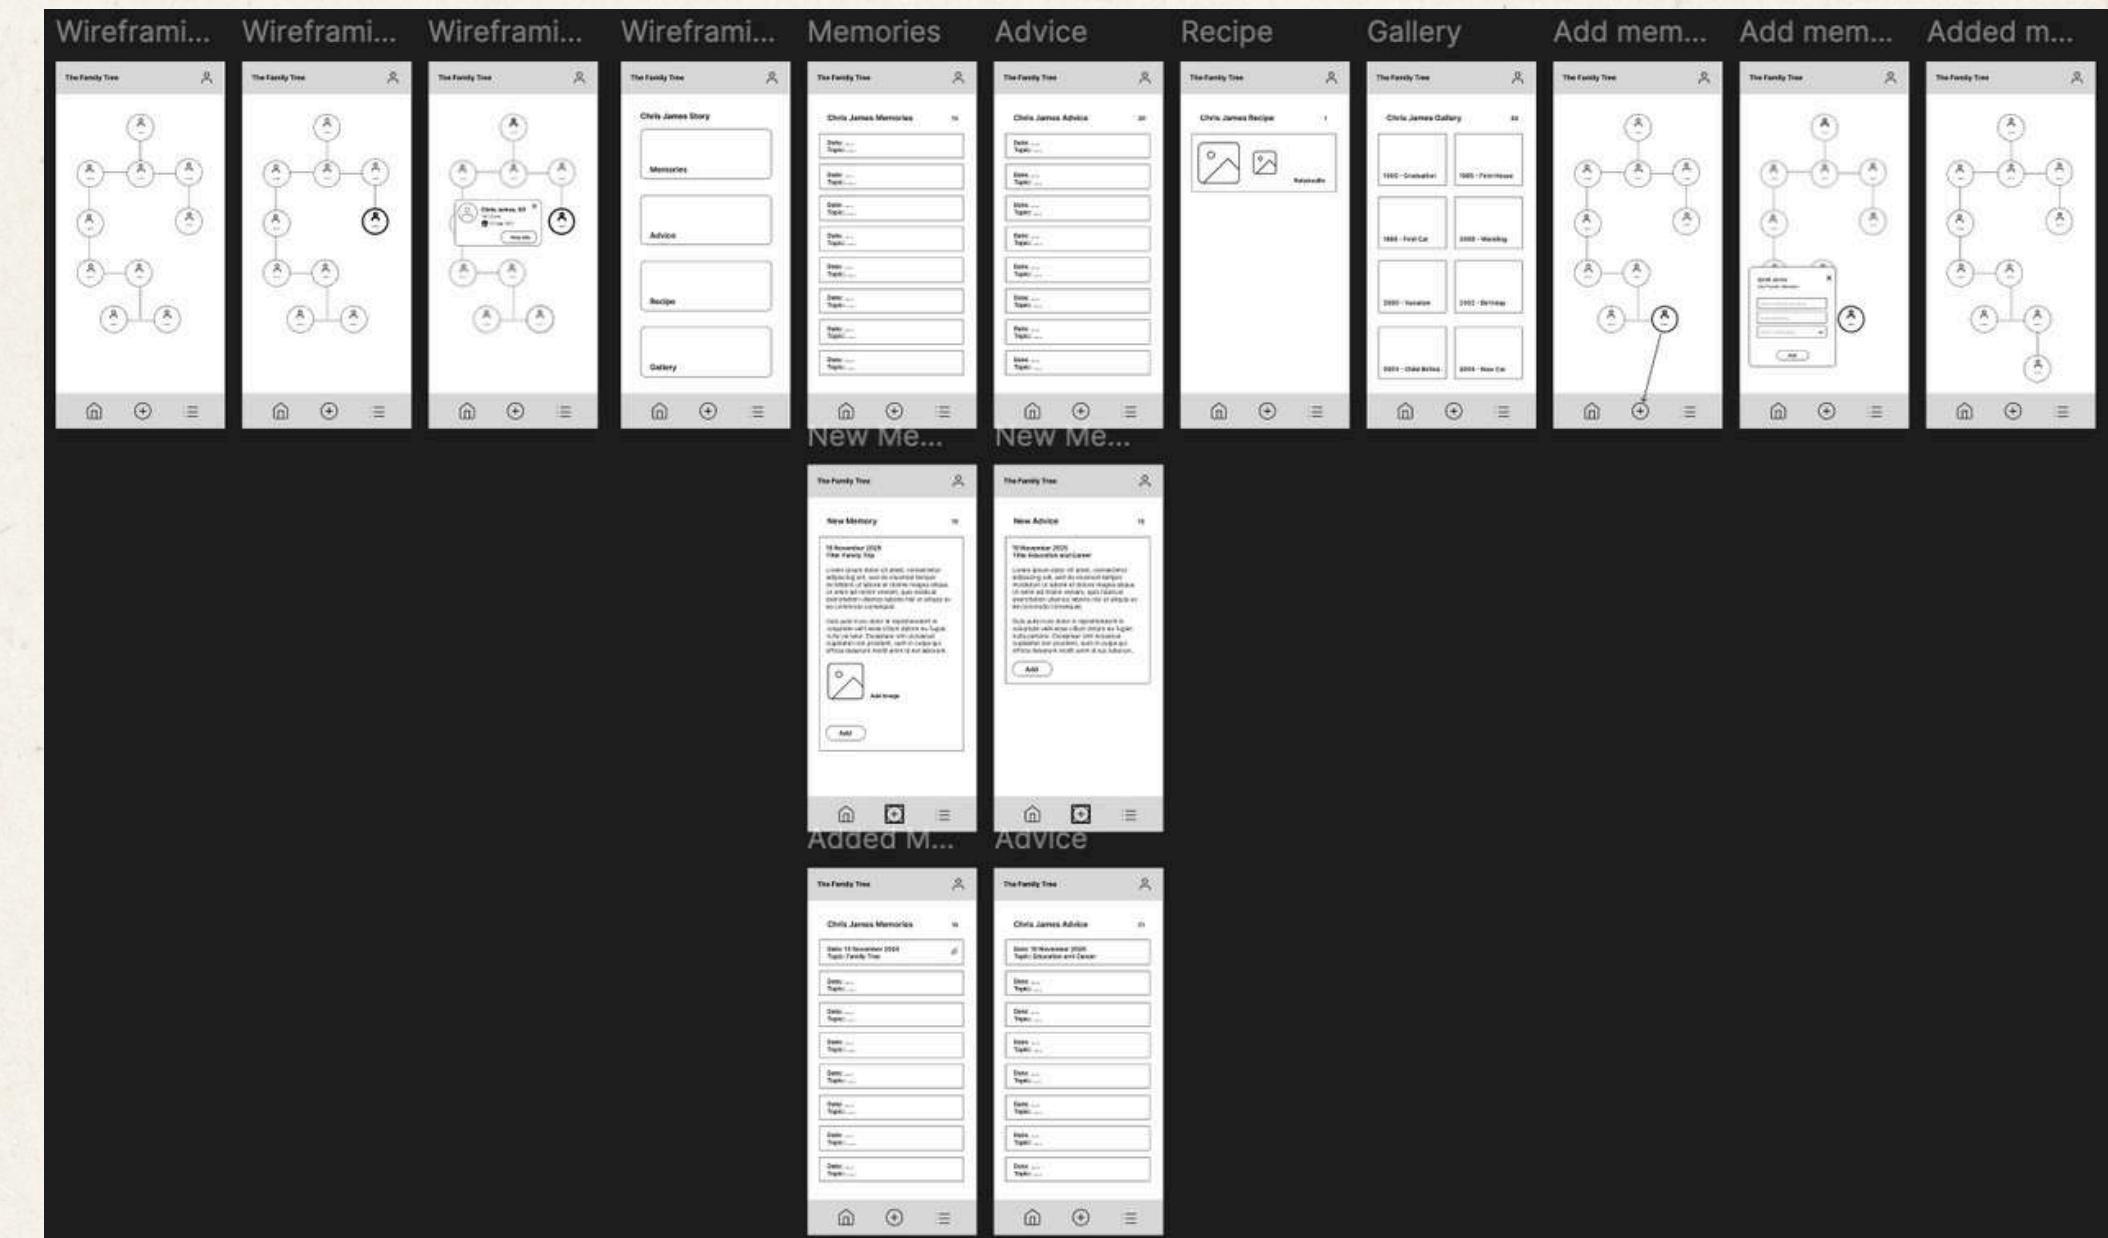

- a. Click any family member to view their:
 - i. Age, Birthday, Recipes, Memories, Advice

4. Add New Content to Profiles

- a. Users can add new:
 - i. Recipes
 - ii. Memories (photos, text, stories)
 - iii. Advice or notes
- b. Content gets linked to the selected family member.

5. Editable Information

- a. Users can update or modify a family member's details or contributions at any time.

[WireFraming Link](#)

CR: Acquisition and Retention

Acquisition:

Attract people seeking a simple way to preserve memories by offering an intuitive “Digital Family Story Tree” that centralizes photos, stories, recipes, and traditions. Market the product by emphasizing the emotional appeal, social sharing, and invitations to each family member. For each signed-up account, there are more functionalities available for that profile.

Retention:

Keep families engaged with ongoing prompts to capture memories (Specific questions sent every day/week to acquire more stories), birthday and anniversary notifications, prompts to try out existing recipes from the older generations, and photo reminders of memories. The evolving visual family tree, collaborative contributions, and preserved heritage create continuous emotional value that encourages long-term use.

Strategy

- QR-code invites for easy onboarding for other family members to join the family group
- Generational storytelling prompts
 - “What is a lesson your parents or grandparents taught you that you still remember today?”
 - “Can you share a story about a family tradition you grew up with and how it started?”
- Automated photo reminders & milestones
 - Remind when there is a birthday or anniversary in the upcoming days
 - Remind good memories in a year

Accounting & Analysis

- First Contribution Rate: % of new users who upload a story/photo within the first 48 hours.
- Monitor engagement: weekly active contributors, prompt response rate, story/photo uploads
- Measure retention: returning family sessions, long-term tree growth, cohort analysis (how many users are active after a certain time period)

Market Study: Users/Customers

1. Market Size & Interest

- The global genealogy market was valued at USD 4.61 billion in 2024 and is projected to reach USD 8–10 billion by 2035, growing steadily due to increasing digital access and interest in ancestry (The Business Research Company, 2024).
- Key growth drivers include digitization of historical records, rising interest in personal heritage and migration history, and wider adoption of DNA-based ancestry testing (Kings Research, 2024).
- Regional market share: North America is the largest (~40%), followed by Europe (~35%), Asia-Pacific (~15%), and the rest of the world (~10%), reflecting broad international adoption of genealogy platforms (Data Horizzon Research, 2024).

2. Consumer Segments

- Casual & Curious Users:** Individuals exploring basic family trees, ancestral names, and old family photos; often use free or basic versions of platforms like MyHeritage or WikiTree (The Business Research Company, 2024).
- Millennials, Young Adults & Families:** Mobile-first users who prefer interactive, visually engaging apps, sharing discoveries and multimedia stories with relatives; includes families preserving heritage for future generations (Kings Research, 2024).
- Serious Genealogists & Hobbyists:** Users requiring extensive historical records, archival research, and DNA verification, often using premium subscriptions or desktop software like Heredis and Généatique for multi-generational accuracy and collaboration (Data Horizzon Research, 2024).

3. Key Trends & Preferences

- Digital-first research: Majority of users rely on online archives and cloud platforms over physical archives.
- Multimedia integration: Growing demand for photos, scanned documents, interactive timelines, video storytelling.
- Mobile accessibility: Younger demographics expect responsive, app-based platforms that simplify tree building.
- Social & collaborative features: Users value shared trees, real-time updates, and collaboration across relatives.

4. Barriers / Challenges

- Complexity: Detailed research can be time-consuming; casual users often drop off.
- Privacy concerns: Users hesitate to upload personal or sensitive family data.
- Cost: Premium subscriptions (\$100–200/year) limit access for casual users.
- Localization gaps: Global platforms often lack detailed local records for non-US/UK regions.

Market Study: Competitors

1. Global Competitors

- MyHeritage (Global)
 - Features: DNA testing, Smart Matches, multilingual support.
 - Strength: Strong global diaspora connections; supports over 40 languages.
- Ancestry.com (Global)
 - Features: Largest historical database, DNA testing, interactive tree building, historical newspapers.
 - Strength: Comprehensive archives and DNA matching tools; strong North American adoption.
- Geneanet (Europe)
 - Features: European archival records, freemium community trees, family tree merging.
 - Strength: Strong local expertise in French, Belgian, and European genealogical archives.
- Heredis & Génétique (Europe)
 - Desktop software with offline archival research capabilities, advanced tree management, and privacy control.
 - Target: Serious genealogists and professionals.
- WikiTree (Global)
 - Features: Collaborative global family tree, community contributions, shared ancestry network.
 - Strength: Free collaborative platform connecting users globally.

2. Competitor Strengths and Weaknesses

- Strengths:
 - Historical record access: Birth, marriage, death certificates, immigration logs, newspapers.
 - Multi-platform support: Desktop, web, mobile apps.
 - Community & DNA features: Enable global connection and collaboration.
 - Premium tools: AI matching, record hints, and subscription-based advanced searches.
- Weaknesses:
 - Complex and outdated interfaces for casual or younger users.
 - Limited multimedia storytelling: Focus mainly on dates, names, and lineage charts.
 - High subscription costs or paywalled records can discourage casual adoption.
 - Localization gaps: Non-US/UK records, especially in Asia, Africa, and Latin America, are often incomplete or difficult to access.

Interviews: Questions, results

1. Did you encounter anything confusing when you first opened the app?
2. How did you decide what to do first when you started using it?
3. How easy or difficult was it to figure out how to add a family member?
4. How would you describe the experience of building your family tree overall?
5. How would you describe the experience of adding memories to family members?
6. Did anything feel confusing or harder than expected while navigating the app?
7. Before we mentioned encryption, how did you feel about storing family information in the app?
8. If you could change one thing to make the app better for you, what would it be?
9. Any other feedback/suggestions?

Questionnaire: Questions, results

1. First Experience

How easy was it to understand how the app works without instructions?

- Very easy
- Easy
- Neutral
- Hard
- Very hard

How easy was it to add a family member?

- Very easy
- Easy
- Neutral
- Difficult
- Very difficult

Did anything confuse you while exploring the app?

Open text: _____

2. Core Actions

How much time did it take to create your family tree?

- Under 1 minute
- 1–3 minutes
- 3–5 minutes
- 5–10 minutes
- More than 10 minutes

Which of these did you figure out how to do? (Select all that apply)

- Add a family member
- Add a memory/story
- View the family tree
- I wasn't sure how to do these

3. Trust & Security

How confident do you feel knowing your data is encrypted and only you can access it?

- Very confident
- Confident
- Neutral
- Not very confident
- Not confident

Did you have any concerns about privacy or data protection while using the app?

- Yes
- No

If yes, please explain: _____

4. Overall Value

How likely are you to keep using the app?

- Very likely
- Likely
- Unsure
- Unlikely
- Very unlikely

If you could change one thing to improve your experience, what would it be?
